Joe, I just finished reviewing the attached workplan dated July 12, 2019 and EPA is OK with you implementing the three studies described in the workplan.

I do have a question. When will groundwater down-gradient of the treatment points will be analyzed to see if the oxidant has reached all groundwater and is effectively treating groundwater before it discharges to the river and how often will this occur? Thanks in advance for moving forward quickly on implementing this study.

Frank and Jeff.

Attached please find BASF's WP to generate necessary and sufficient data to verify the efficacy of the proposed ISCO PRB technology and support the in-place design. It also includes a schedule, which shows that much of the system will be installed by September, and owing to its simplicity, it is amenable to adjustment as the performance data starts to flow.

As you have questions and comments, please send them along and we will address them in a timely manner. I will set up a WebEx conference at your convenience, if needed.

Please let us know if you need one or more hard copies.
